

Why Leave Your Valuables Unprotected?

it's all about
DATA
INTEGRITY

It's foolish to leave a valuable car exposed to the elements, so why leave open data ports exposed to dust and contamination? After all, the integrity of every connection in your structured cabling system is critical to the performance of your communications network. That's why we introduced our **DataGate™** high-performance jack. It's one more example of what we mean when we say, "it's all about data integrity".

The patented **DataGate** jack features a unique shuttered design that **automatically closes upon plug disconnection** to protect the data connection from any dust or contaminants. With every connect/disconnect of the **DataGate** jack from the plug, the integral shutter wipes the connection pins clean. And, the easy single-handed plug-in provides an audible, secure connection with maximum plug retention.

DataGate modular jacks are available in multiple colors for easy port identification at the workstation and the communications closet. No one would ever leave a Porsche out in a dust storm. So, for virtually no additional expense, why would anyone ever choose to leave valuable data ports unprotected again?
